

... our laboratory services ...

For verification and further analysis of the measurements obtained online you can benefit from our state-of-the-art laboratory facilities. The development of online-applications are based upon profound analytical knowledge. Our know-how has been gained through many years of experience monitoring and identifying the following:

- Pollutants (pesticides, PAH, PCB, heavy metals ...)
- Harmful substances in foodstuffs
- Harmful substances in commodity goods
- Taints and off-flavors
- Medical problems
- and many more...

The use of the newest technology and measuring methods ensures reliable and modern order processing. No need to mention that measuring results will be supplied quickly and high quality standards are maintained.
