Packaging Options

Three Convenient Packaging Options to Satisfy Your Specific Needs:

Quik-Chek™ Solutions

- Convenient & ready to use
- Quantities are net weights, accounting for salts, level of hydration, and purity
- No DEA license required (USA and Canada)
- \$100 USD minimum order on Quik-Chek™

7497

These standards are prepared in our labs in a suitable, stable solvent that allows immediate use. Each solution is prepared at a stated concentration of the compound compensating for any salt or level of hydration that may be present as well as level of purity. They are supplied sealed in silanized glass ampoules under an argon blanket for maximum stability. A silanized glass screw-cap vial with "Top Hat" closure is supplied for storage after the ampoule has been opened. Not only do Quik-Chek™ solutions save time, they also provide standards to those who do not have a DEA license. For those residing outside the USA and Canada, contact the responsible government agency for importing instructions.

Throughout this catalog, Quik-Chek™ Standards are identified with this symbol ✓

Dilute 'N Shoot™ Standards*

- Pre-weighed, just add solvent
- Quantitative weights calculated on "base" drug

7499

These materials are supplied in a silanized amber bottle large enough to allow for dilution of the standard without transfer of the contents. The fluid capacity of the bottle is 15mL which would allow dilution directly in the bottle down to a concentration of 0.7µg/µL. Appropriate closures are also provided for direct syringe needle access to the prepared solution. The theoretical and actual weight of the drug is listed with dilution instructions. In the case of drugs that are salts or hydrated, the weight is calculated to give a "base" weight of the actual drug.

Throughout this catalog, Dilute 'N Shoot™ Standards are identified with this symbol 💧

Neat Standards*

- Weigh and dilute to fit your needs
- Purity and identity confirmed on certificate of analysis

Materials are supplied in a stable, pure form that lets the researcher make their own mixes and solutions. No adjustment is made for salt or level of hydration in the weight of the material. Each unit is packaged in an amber, polypropylene vial with a color-coded** screw cap that identifies scheduled items for storage purposes. Liquids such as "Nicotine" are supplied by volume in sealed amber ampoules.

* **Note:** Some drugs are restricted by the Drug Enforcement Administration (DEA) and cannot be purchased unless the investigator has a license to handle and store the materials. For more information, contact your local DEA regional office (USA) or the responsible government agency for those outside the USA.
